22 alert icmp any any -> any any (msg: "testing ICMP"; sid:1000001)  
23 alert tcp any any -> any any (msg: "testing ICMP"; sid:1000002)  
24 alert udp any any -> any any (msg: "testing ICMP"; sid:1000003)
```

3.2. Adding Rules for logging alerts

Date : 14-8-23

Adding Visuals and Getting Reports

Page No. : 6
Expt. No. : 3a

Aim To add the visuals and get Reports

Procedure To add the visuals, we need to access "local.rules" located in C:\Snort\Rules and open it.

Type the following commands

~~alert icmp any any → any any (msg: "testing ICMP"; sid:1000001)~~
~~alert tcp any any → any any (msg: "testing TCP"; sid:1000002)~~
~~alert udp any any → any any (msg: "testing UDP"; sid: 1000003)~~

Save the local.rules

Open CMD in C:\Snort\bin path

Type Command: Snort -i 3 -c c:\Snort\etc\Snort.conf

I is interface, C - location of file where you want it to run

A → print O/P in terminal

Finally Snort will sniff the network interface specified and all the traffic that's passing through our network

3.3. Executing Snort Command for log collection

3.4. Collecting logs in network traffic

Date : 14/8/23

Page No. : 7
Expt. No. : 3a

Result

Thus the visuals are added and modified and the reports are collected

Fig-3a . Security holes in the network

Aim To identify security holes in networking ports using python.

Code → `import socket, threading, time`

```
print_lock = threading.Lock()
host = input("Domain Name")
ip = socket.gethostname(host)
print("-" * 60)
print(f"Scanning Start Target IP : {ip}")
print("-" * 60)
```

```
def port_scanner(port):
    Soc = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
    Soc.settimeout(1)
    result = Soc.connect_ex((ip, port))
```

if not result:

try:

```
    ServiceName = socket.getservbyport(port, "tcp")
    print(f"Open {port} {ServiceName}\n")
```

except:

```
    print(f"Open {port} Unknown\n")
    Soc.close()
```

for port in range(1, 1025):

```
    th = threading.Thread(target=port_scanner, args=(port, 1))
    th.start()
```

Page No. : 9
Expt. No. : 36

Result

Thus, the security holes in the networking ports are successfully identified using python.
